Additional Notes:

Preparation – Option to foam and apply Nimue Cleansing Gel with fan brush. Cleanse and remove with gauze. Apply Conditioner to gauze and wipe over skin.

Exfoliating Enzyme – Apply with dry fan brush and leave for 2 minutes. Add water to finger tips and massage over the skin for 8 mins. Alternatively, use steam. Emulsify with water and remove with damp aesthetic wipe.

Peel application – Ensure the fan brush is dry prior to applying peels. All peels can be applied with a fan brush, other than SRC hyperpigmented and SRC Problematic, which are to be applied with the Nimue Peel Applicator.

Neutraliser Plus – Dispense into hands and apply and gently massage over the skin. If a client is still experiencing sensations from the peel, please apply additional neutraliser. Do not remove with water until sensation has minimised, then follow with damp aesthetic wipes to remove.

Super Fluids – Option to customise SRC peels. Select 1 – 2 Super Fluids and mix into the peel to assist with the delivery of the active ingredients from the Super Fluids. Alternative options, following peel removal apply Super Fluids under masks, infuse with a device, or apply directly post peel.

Product	Skin Condition	Key Ingredients	Prep	Application	Time left on skin	Removal
Smart Micropeel		6% Mandelic 4% Lactobionic acid	Exfoliating Enzyme	Nimue peel brush	3 minutes (peel only) 5-10 (with soothing recovery mask)	With water
