

CAMELLIA AMBER PEEL BALM - 150G

For professional intensive resurfacing treatments

Spicule length: 300um

15 million spicules per treatment

*Only for thick skins with an intact barrier and no sensitivity. This treatment is our most intense resurfacing as it has a dual action of granular exfoliation and spicules. Recommended for those who are looking for intense resurfacing.

PRODUCT OVERVIEW

VitaSpicule Amber Peel is an intensive resurfacing treatment designed for advanced skin correction and renewal. Featuring 300µm spicules and 15 million bio-needles per treatment, it delivers a powerful skin-renewing response for clients requiring deeper exfoliation and visible skin transformation.

Long spicules create a stronger stimulation effect, encouraging accelerated cellular turnover and collagen production while helping to improve the appearance of severe photoageing, textural irregularities, congestion and post-acne scarring. Camellia seed particles further enhance exfoliation by removing accumulated surface debris and dead skin cells.

The addition of nutrient-rich botanical butters helps support skin recovery and barrier repair, balancing intensive resurfacing with nourishment and protection.

FEATURES & BENEFITS

- Intensive resurfacing treatment designed for advanced skin correction and renewal
- Contains 15 million bio-needles and long 300µm spicules to stimulate deep cellular turnover
- Supports collagen production to improve skin firmness, texture and overall skin quality
- Helps visibly reduce roughness, congestion, uneven skin tone and post-acne scarring
- Combines powerful exfoliation with nourishing botanical butters to support skin recovery and barrier repair
- Delivers visible peeling and transformative skin-smoothing results with improved clarity and radiance

KEY INGREDIENTS

- **Hydrolysed Sponge** – delivers intensive spicule exfoliation to accelerate cellular turnover and support collagen renewal
- **Camellia Seed Particles** – granular exfoliant that naturally exfoliates dead skin cells and helps refine skin texture
- **Avocado Butter** – deeply nourishes and supports skin barrier repair during recovery
- **Mango Seed Butter** – replenishes essential lipids and helps maintain skin comfort
- **Vitamin E** – provides antioxidant protection while supporting skin recovery and resilience

USAGE RECOMMENDATIONS

- Ideal for severe photoageing and sun-damaged skin
- Suitable for thickened, congested and heavily keratinised skin
- Recommended for acne-prone skin and post-acne scarring
- Suitable for clients seeking intensive resurfacing and visible skin renewal
- Not suitable for sensitive, reactive, inflamed or barrier-compromised skin
- Always pair with calming, hydrating and barrier-support products following treatment

TREATMENT PROTOCOL

- Cleanse and prepare the skin thoroughly.
- Soften the skin with a warm, damp towel compress for 30-60 seconds
- Apply approx. 3mL of Amber Peel Balm by evenly dotting over the face.
- Massage for 3-5 minutes using gentle pressing and circular movements, adjusting pressure on delicate areas. Keep communicating with your client and adjust pressure as needed.
- Remove excess product with warm, damp towel compress by pressing - do not rub.
- Apply a cooling and calming mask for 15 minutes such as SpongillaTech SOS Calming Mask or Ice Calming Mask.
- Remove the mask and complete the treatment with calming, hydrating and barrier-support products.
- Do not apply SPF

TREATMENT INFORMATION

Expected Responses:

- Needling sensations during and after treatment
- Feels like glass shards. Can be intense so isn't for everybody.
- Temporary redness and warmth
- Possible dryness and visible peeling during the renewal process
- Progressive improvement in skin smoothness, clarity and texture

PROFESSIONAL NOTE

Due to the concentration of spicules and intensive peeling response, Amber Peel should only be performed by trained skin professionals. Careful client selection, thorough consultation and adherence to post-treatment care protocols are essential to achieve optimal outcomes.

Treatment can be customised. On average use 3mL for the face. For a less intense treatment, use 2mL and more intense use a maximum of 5mL (to include neck and décolletage.)
