

Vasco

Decongesting Cream

Vascularizing Line

Vasco is a decongesting cream suitable for blotchiness or couperose. It facilitates the vascularization of the capillaries.

Size: Retail 30 mL/Salon 150 mL

About

Key Ingredients

Phytostimulines from camomile, St. John's wort, coltsfoot, sage and althea.

Allow a better vascularisation of the capillaries. Decongesting, soothing, anti-inflammatory, healing and antiseptic.

One biological compound with glycine and vitamin PP or B3 nicotinic acid and vitamin E.

Rejuvenates and strengthens capillary walls, which contributes to the increase of their elasticity.

Sweet almond oil rich in essential fatty acid.
Nourishes and softens the skin.

Actions

Vasco allows a better vascularisation of the capillaries and strengthens their walls therefore increasing their elasticity.

In the case of local congestion Vasco should only be used where needed.

Vasco vascularizing properties accelerate the results of rejuvenation of dull, lifeless and ageing skins.

In these cases Vasco should be used all over the face.

Use

Skin Conditions

Vasco is used locally for congested or couperose skin.

Vasco can also be used all over the face in case of lifeless ageing skin to accelerate the results of rejuvenation.

Home Use

Morning

In the morning, apply a small amount to blotchiness or couperose and follow with Synchro regenerating cream.

Or, in case of lifeless ageing skin, apply all over the face and follow with other specific creams.

Salon Use

Step #4 of Skin Care Treatment

Vasco should be used after the preliminary treatment.

Use a small amount locally on couperose or congested areas, or a large quantity on dull, lifeless skin.

Must be followed by Synchro regenerating cream.
