Client concern

"I love tanning and I have a very unhealthy lifestyle. I live in a highly polluted area which has left my skin sensitised, stressed and inflamed. I am worried this will result in premature ageing!"

Why does it work?

UV induced inflammation is a BIG factor in the formation of premature ageing and a sensitised skin.

The active ingredient, Cyanoacrylate, stops the formation of free radicals & reactive oxygen species, thus preventing inflammation.

Less inflammation = less sensitivity and photo ageing

The Nimue Solution

The Cyanoacrylate Super Fluid can be used to customize ANY Nimue professional treatment and works specifically on reducing sensitivity and inflammation.
