KEY INGREDIENTS

- **Hydrolysed Sponge** - Aids skin regeneration & ingredient delivery
- **Damascus Rose** - Antioxidant, soothes & calms
- **Allantoin (Comfrey Root)** - Soothes & calms

USAGE RECOMMENDATIONS

AT HOME USE - Use every 2 to 3 days (PM)

1. Cleanse the skin with a gentle cleanser.
2. Apply three (3) pumps (3mL) of Skin Revitalizing Gel directly to the skin with damp fingertips. Massage the product over the skin in the same way as you would apply an exfoliant. Avoid the eye area.
3. Ensure you maintain slip over the skin by adding water as needed. Massage over the skin 3 to 10 minutes maximum.
4. Rinse the skin with water.
4. To follow, we suggest applying a hydrating facial mask (such as Sequential Skin Hydration sheet mask) for 15- 20 minutes.
5. Use a moist towel to remove any residue on the skin. Apply a moisturizer containing NO Retinol or AHA and BHA actives. GERnetic Synchro cream is recommended.
6. Continue your usual skincare routine the following day, but avoid AHA, BHA, or Retinol. Use an SPF and avoid sun exposure.

SALON USE

1. Cleanse the skin with a gentle cleanser.
2. You may use an LED Light before treatment application.
3. Apply three (3) pumps of Skin Revitalizing Gel directly onto the skin in each area: forehead, cheeks, and neck. Avoid the eye area. A serum such as Nimue Superfluid can be added to increase the slip of the product and customise the treatment according to the client's skin concern.
4. Massage the product into the skin for up to 15 minutes. Keep adding water to maintain slip. For thin and fragile skin, reduce the operation time.
5. You may carry on with your usual facial protocol, but avoid AHA, BHA, and retinol. Be advised that skin actives will be absorbed/penetrated 20-30 times more, as you have 50 thousand spicules implanted, creating microchannels.
6. Clients may feel a prickling sensation, which is normal.
7. If you decide to massage, carry out light effleurage movements to not cause the client too much of a prickling sensation. A mask, such as a Sequential sheet mask or a GERnetic/Nimue Peel-off Mask, may be applied. Leave to act for 15 minutes.
8. To complete the treatment, finish with Repair Gel or GERnetic Calming Care and Synchro cream. Advise the client to avoid sun exposure. It is recommended that the client doesn't cleanse in the evening. This will increase the longevity of the spicule implantation.
9. The following day, the client should avoid AHA, BHA, and vitamin A for the next seven (7) days. After this period, they may continue with their routine, including SPF.
