

BIO NEEDLING

MESO

VITASPICULE PINK ICE
Pink Iceneedle Powder: 20 x 0.5g vials
4 million bio-needles per treatment
Spicule length: 300um

BIO-MESOTHERAPY – EXCLUSIVE TO OUR SPONGILLA TECH RANGE

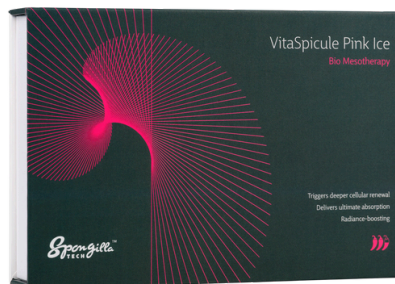

We're the only spicule-based treatment range offering Bio-Mesotherapy — a breakthrough in active ingredient delivery. In this advanced method, each spicule is individually wrapped in potent active ingredients. Once the serum is applied, the spicules swell, creating micro-channels in the skin while carrying their nutrient-rich coating deep into the skin.

IDEAL CLIENT

- Ideal for clients who love to feel a treatment or prefer stronger, deeper needling sessions
- Designed for thicker sun damaged skins with a thicker epidermis or those with a thick oily skin.
- Stronger treatment more heat and very prickly.
- Ideal for deeper lines and wrinkles and those with lots of sun damage.
- Not for fine delicate skins with sensitivity or clients who do not want a strong treatment.

KEY INGREDIENTS

- **Hydrolysed Sponge** -Spicules aid skin regeneration & ingredient delivery
- **Damask Rose** - Hydrating, soothing, anti-ageing, rich in Vitamin C
- **Ectoin**- A natural molecule produced by salt-loving bacteria. It creates a protective hydration shell around cells, boosting hydration and protecting DNA.
- **Cyanocobalamin** - Vitamin B12 derivative, pink in colour - antioxidant to hydrate, brighten and strengthen the skin barrier.

BIO NEEDLING

USAGE RECOMMENDATIONS

SALON USE

1. Disinfect the skin. We recommend GERnetic Sebo Ger lotion as the most suitable option, but saline is also applicable. If you are treating active acne, extract pustules and disinfect the skin again.
2. Open one Pink IceNeedle powder vial and pour all the contents into a dish. Customise the active infusion of the bio-needling with your choice of serum to address the customer's concern. We recommend mixing with chosen Spongilla X serum (10ml}. Use entire contents of serum, mix with the Pink Iceneedles in dish, then add distilled water to loosen the product, creating a gel-like texture. The more water used, the more peeling the client will have.
3. Apply the product, starting with the forehead, and massage it into the skin using circular motions. Once the product is mostly absorbed, apply it to one side of the face and nose, avoiding the eye area. Then, carry out on the opposite side of the face. You may include the neck if you wish or repeat on the forehead and each side of the face until all the product has been used. Massage spicules for 15 minutes in total.
4. Skin cooling and mask application: it is recommended that a mask be applied for up to 15 minutes over the top of any remaining product on the skin. Suggested mask is the Sequential Sheet Hydration mask (which contains Hyaluronic Acid).
5. Remove the mask and gently wipe the excess product off the skin with a wet towel.
6. Finish with Skin Repair Gel or GERnetic Calming Care and Synchro to soothe and calm the skin and boost skin renewal.

Optional: If this is the client's second or third treatment, a mild active can be applied straight after the mask removal to take advantage of the 3-5 million micro-channels created by the spicules.

The client is to follow the aftercare recommendation guide.
